

List Comprehensions

Day - 6

Shorter way to build a new list

```
lst = [1, 2, 3, 4, 5, 6]
```

```
lst2 = []
```

```
for i in lst:
```

```
    lst2.append(i*2)
```

```
print(lst2)
```

```
numbers = [1, 2, 3, 4, 5]
```

```
sq_n = [i*2 for i in numbers]
```

```
print(sq_n)
```

num * num for num in numbers
prints

Take each item in numbers one by one and call it num

order:

what value goes in result

where item comes from

which item is allowed
