

Day 7

dictionary { key: value,
 key: value
 }

asking for specific value

dictionary_name[key]

To change value

↳ dict_name["existing key"] = new_value
 adds if not exist

To delete

del dictionary_name["key"]

a = user.pop("language")

dictionary.pop("key")

dictionary.keys() → returns all key

" . values() → " " values

" . items() → " " pairs → key value pairs

" . get("key") → " value and none if missing

" . get("key", default) → Returns default " "

{ "key": { "inner-key": value } } → directory inside dict

" ["key"] ["inner-key"] → value from inner dict
